

## 5.SELECT 1

SELECT Acc\_No FROM `bank` WHERE 1

The image consists of two screenshots of the phpMyAdmin web interface, demonstrating the execution of a SQL query.

**Top Screenshot:** The interface shows the 'Run SQL query/queries on table dbms.bank:' window. The query entered is `1 SELECT Acc_No FROM `bank` WHERE 1`. The table structure on the right lists columns: S\_No, Cust\_Name, Acc\_No, Balance, and cus\_Branch. Below the query editor, there are buttons for SELECT, INSERT, UPDATE, DELETE, Clear, Format, and Get auto-saved query. A warning message at the bottom states: 'Current selection does not contain a unique column. Grid edit, checkbox, Edit, Copy and Delete features are not available.'

**Bottom Screenshot:** The interface shows the results of the query. A message indicates 'Showing rows 0 - 7 (8 total, Query took 0.0007 seconds)'. The query is displayed as `SELECT Acc_No FROM `bank` WHERE 1;`. Below the query, there are options for Profiling, Edit inline, Edit, Explain SQL, Create PHP code, and Refresh. The results are displayed in a table with the following data:

Acc_No
1234
1256
1257
1258
1259
NULL
366
444

Below the table, there are options for Show all, Number of rows (25), and Filter rows (Search this table). At the bottom, there are options for Query results operations: Print, Copy to clipboard, Export, Display chart, and Create view. A OneDrive notification is visible in the bottom right corner: 'Screenshot saved. The screenshot was added to your OneDrive.'
